## All Rack, LLC / PESCO Spill Containment

319 Commerce Court, Suite 103  
Pottstown PA 19464 Tel: 610- 285-1310, Email: [TeamAllRack@allrackllc.com](mailto:TeamAllRack@allrackllc.com)  
Distributor for: PESCO Battery Spill Containment Systems  
Passoni Alpha Insulated Modular battery racks  
Insulated Tools & Torque Wrenches  
Eyewash Equipment  
Hydrogen Detection Equipment

## EZ Install One Piece Spill Containment Pan

Designed around Fire and Building Code Requirements, PESCO's Spill Containment Systems utilize the latest technology for creating a liquid tight seal and neutralization of sulfuric acid. This 1/4" polypropylene pan provides a code compliant solution where special floor considerations are required. It can be installed on raised computer room floors, placed across I-beams or placed on tile or concrete floors. These pans can also be installed in cabinets to provide an acid resistant secondary containment barrier.

**Polypropylene is extremely tough and acid resistant.** Many battery manufacturers use polypropylene as a battery jar material because of its toughness and acid resistance. This material will withstand battery room conditions and can support up to 150,000 lbs per square inch without degradation of the material. The walls of the polypropylene pan are welded together to ensure a liquid tight seal as required by various codes.

PESCO Acid absorbing and neutralizing pillows and socks can be supplied with the polypropylene pan to create a code compliant system. Use of PESCO's EZ polypan spill containment systems eliminates the need for additional sealants, hardware, tools, and floor cleaning or preparation.

*Product Specifications: NFPA Chapter 35 UFC Article 64*  
*1/4" Polypropylene*  
*Welded Corners, Liquid Tight*  
*4" Side Walls*  
*12" X 12" Acid Absorbing & Neutralizing Pillows (L.A./NiCD)*  
*4" x 24" Socks for Lead Acid & NiCD battery installations*
